

# 22437 - Industrial Vision

## Lab 2: Digital Image Formation

Jaume Taberner Ferrer

Universitat de les Illes Balears

1. Generate the following binary images of size  $256 \times 256$  and display the results:

Note: The images must be defined using the `logical` data type.

2. Generate the following gray scale images of size  $256 \times 256$  and display the results:

Note: The images must be defined using the `uint8` data type.

3. Generate the following RGB images of size  $256 \times 256$  and display the results:

Note: The images must be defined using the `uint8` data type.

4. Write a function in Matlab to generate the histogram of a gray scale image without using Matlab functions. The signature of the function must be:

**function** `h` = `histogram`(`image`)

where  $h$  is a column vector with 256 elements of type *double* and `image` is the input gray scale image. Each component of  $h$  indicates the number of pixels of the correspondent intensity present in the image.

5. Using the function implemented in the previous point, compute the histogram of the images of the exercise 2, and plot the results. Are the histograms the same?
6. Resize the images generated in exercise 2 to  $512 \times 512$ ,  $128 \times 128$  and  $64 \times 64$  using the correspondent Matlab function. Plot each resulting image and its correspondent histogram in figures. Given these histograms, how can we say about the resizing process in Matlab?
7. Write a function in Matlab to reduce images of size  $256 \times 256$  to  $128 \times 128$ . The intensity value in the output image should be the maximum intensity in a neighborhood of the input image according to the following pattern:

	1	2	3	4	5	6	7	8
1	■	■						
2	■	■						
3								
4								
5								
6								
7								
8								

	1	2	3	4
1	■			
2				
3				
4				

The signature of the function must be:

**function** himage = halvesize(image)

where *image* is the input image ( $256 \times 256$ ) and *himage* is the output image ( $128 \times 128$ ).

8. Use the function implemented in the previous point to reduce images generated in exercise 2 and display the results.
